

PVC Cutter with Built In Can Top Opener, Version 1.0

If you use a PVC cutter, it is a good bet that you also use PVC primer and solvent.

With rare exception, I have to leave the place I'm working and go get a slip lock pliers in order to open the cans of primer and solvent.

Not anymore!

Tucked inside the handle of the PVC cutter is a short length of hacksaw blade with the teeth pointing to the right. Using an existing hole in the hacksaw blade plus a #27 holes in the handle, I ran a 6-32 screw and

secured it with a locking nut.

I grip the top of the can with the back end of my PVC cutter. Then as I turn the cap counter clockwise, the teeth grab nicely. The cap then easily unscrews.

I welcome your comments and questions.
